

# Jigme Namgay

**Nationality:** Bhutanese

**Phone:** (+975) 17372375

**Email:** j.namgay11@gmail.com

---

## PROFESSIONAL SUMMARY

Dedicated Geoinformatics Engineer with a Bachelor of Technology (B.Tech) background and professional experience in national-level geospatial projects. Experienced in Geographic Information Systems (GIS), remote sensing, spatial data processing, land use and land cover mapping, and geospatial database management. Skilled in using QGIS, ArcGIS Pro, ArcGIS Online, and Google Earth Engine for spatial analysis, data visualization, and geospatial workflow development.

Possesses practical experience in spatial data quality control, vector data validation, cartographic production, satellite image analysis, and integration of modern web technologies into geospatial applications. Interested in advancing geospatial solutions through automation, spatial databases, data analytics, and emerging geospatial technologies.

---

## EDUCATION AND TRAINING

### Bachelor of Technology (B.Tech) in Geoinformatics Engineering

**University of Petroleum and Energy Studies (UPES)**

Dehradun, India

**03 June 2017 – 03 June 2021**

#### Major Areas of Study:

- Geographic Information Systems (GIS) and spatial analysis
- Remote sensing and satellite image processing
- Digital photogrammetry and image interpretation

- Spatial databases and data management
- Coordinate Reference Systems (CRS), datums, and geospatial projections
- Geostatistical analysis and spatial modelling
- Cartography and map production

**Medium of Instruction:** English

---

## PROFESSIONAL EXPERIENCE

### Survey Engineer / Geoinformatics Engineer

**National Land Commission Secretariat (NLCS)**

Thimphu, Bhutan

**01 January 2023 – Present**

- Contribute to national-level geospatial projects involving GIS data management, spatial analysis, and geospatial information production.
  - Perform spatial data processing, quality assessment, topology validation, and attribute verification using QGIS and ArcGIS Pro.
  - Support the development and production of national Land Use and Land Cover (LULC) mapping initiatives through satellite image analysis and geospatial workflows.
  - Conduct spatial analysis and visualization to support land management, planning, and decision-making processes.
  - Assist in maintaining geospatial datasets according to national standards and metadata requirements to improve data interoperability.
  - Participate in the development of geospatial web applications and visualization components for improving access to spatial information.
  - Utilize modern development tools and version control systems, including GitHub, for managing geospatial application workflows.
  - Collaborate with technical teams and government stakeholders in implementing geospatial solutions.
- 

## TECHNICAL SKILLS

### GIS and Geospatial Technologies

- Geographic Information Systems (GIS)
- QGIS
- ArcGIS Pro
- ArcGIS Online
- Google Earth Engine
- Google Earth Pro
- ERDAS Imagine
- Spatial Analysis and Visualization
- Remote Sensing
- Satellite Image Processing
- Cartography
- Digital Image Analysis
- Geospatial Data Management

## **Programming and Data Technologies**

- Python
- Spatial Data Processing Automation
- Basic Web Development Technologies
- GitHub Version Control

## **Database and Data Management**

- Spatial Database Concepts
- Relational Database Management Systems (RDBMS)
- Geospatial Data Quality Control
- Metadata Management

## **Office and Design Tools**

- Microsoft Word
- Microsoft Excel
- Microsoft PowerPoint
- Adobe Photoshop

---

# **CORE COMPETENCIES**

- Geospatial Data Analysis
- Remote Sensing Applications

- Land Use and Land Cover Mapping
- Spatial Data Quality Assessment
- GIS Workflow Development
- Map Production and Visualization
- Technical Documentation
- Problem Solving and Analytical Thinking
- Team Collaboration
- Government Geospatial Project Support
